

1           1.   (Unchanged) A computerized method comprising:  
2           accessing a user-definable preferences list that identifies a plurality of channels  
3   from a plurality of different sources; and  
4           selecting one of the plurality of identified channels for provision to a user.

1           2.   (Unchanged) The computerized method of claim 1, further comprising:  
2           providing, to the user, one or more of audio and video from a source  
3   corresponding to the selected one of the plurality of identified channels.

1           3.   (Unchanged) The computerized method of claim 1, further comprising:  
2           accessing, to determine a component corresponding to the selected one of the  
3   plurality of identified channels, a programming guide database that is independent of the  
4   user-definable preferences list; and  
5           sending a signal to the component to provide the selected channel.

1           4.   (Unchanged) The computerized method of claim 1, further comprising:  
2           receiving a user request to provide a new channel; and  
3           wherein the accessing and the selecting are performed in response to the user  
4   request.

1           5.   (Unchanged) The computerized method of claim 4, further comprising:  
2           repeating the accessing and selecting in response to subsequent user requests to  
3   provide a new channel.

1           6. (Unchanged) An article comprising:  
2           a storage medium; and  
3           the storage medium having stored thereon a plurality of instructions that, when  
4           executed by a processor, result in accessing a user-definable preferences list that  
5           identifies a plurality of identified channels from a plurality of different sources, and  
6           selecting one of the plurality of channels for provision to a user.

1           7. (Unchanged) The article of claim 6, wherein the plurality of instructions,  
2           when executed by the processor, further result in providing, to the user, one or more of  
3           audio and video from a source corresponding to the selected one of the plurality of  
4           identified channels.

1           8. (Unchanged) The article of claim 6, wherein the plurality of instructions,  
2           when executed by the processor, further result in accessing, to determine a component  
3           corresponding to the selected one of the plurality of identified channels, a programming  
4           guide database that is independent of the user-definable preferences list, and sending a  
5           signal to the component to provide the selected channel.

1           9. (Unchanged) The article of claim 6, wherein the plurality of instructions,  
2           when executed by the processor, further result in receiving a user request to provide a  
3           new channel, wherein the accessing and the selecting are performed in response to the  
4           user request.

1           10. (Unchanged) The article of claim 9, wherein the plurality of instructions,  
2           when executed by the processor, further result in repeating the accessing and selecting in  
3           response to subsequent user requests to provide a new channel.

1        11. (Unchanged) An apparatus comprising:  
2        a storage device to store a user-definable preferences list that identifies a plurality  
3 of channels from a plurality of different sources; and  
4        a channel selection controller, coupled to the storage device, to access the user-  
5 definable preferences list and select one of the plurality of identified channels for  
6 provision to a user.

1        12. (Unchanged) The apparatus of claim 11, further comprising:  
2        a component controller coupled to the channel selection controller;  
3        wherein the channel selection control is to send the selected one of the plurality of  
4 identified channels to the component controller, and  
5        wherein the component controller is to tune a corresponding component to  
6 provide, to the user, one or more of audio and video from a source corresponding to the  
7 selected one of the plurality of identified channels.

1        13. (Unchanged) The apparatus of claim 11, wherein the channel selection  
2 controller is further to:  
3        access, to determine a component corresponding to the selected one of the plurality of channels,  
4        a programming/guide database that is independent of the user  
5        definable preferences list; and  
6        send a signal to the component to provide the selected channel.

1        14. (Unchanged) The apparatus of claim 11, wherein the channel selection  
2 controller is further to:  
3        receive a user request to provide a new channel; and

4 wherein the accessing and the selecting are performed in response to the user  
5 request.

1 15. (Unchanged) The apparatus of claim 14, wherein the channel selection  
2 controller is further to repeat the accessing and selecting in response to subsequent user  
3 requests to provide a new channel.

1 16. (Unchanged) An apparatus comprising:  
2 means for storing a user-definable preferences list that identifies a plurality of  
3 channels from a plurality of different sources; and  
4 means, coupled to the storage device, for accessing the user-definable preferences  
5 list and selecting one of the plurality of identified channels for provision to a user.

1 17. (Unchanged) The apparatus of claim 16, further comprising:  
2 means, coupled to the means for accessing and selecting, for controlling  
3 components in an entertainment system; and

4 wherein the means for accessing and selecting is for sending the selected one of  
5 the plurality of identified channels to the means for controlling, and wherein the means  
6 for controlling is for tuning a corresponding component of the entertainment system to  
7 provide, to the user, one or more of audio and video from a source corresponding to the  
8 selected one of the plurality of identified channels.

1 18. (Unchanged) The apparatus of claim 16, wherein the means for accessing and  
2 selecting includes:

3 means for accessing, to determine a component corresponding to the selected one  
4 of the plurality of identified channels, a programming guide database that is independent  
5 of the user-definable preferences list; and

6 means for send a signal to the component to provide the selected channel.

1 19. (Unchanged) The apparatus of claim 16, wherein the means for accessing  
2 and selecting includes:

3 means for receiving a user request to provide a new channel; and

4 wherein the accessing and the selecting are performed in response to the user  
5 request.

1 20. (Unchanged) The apparatus of claim 19, wherein the means for accessing  
2 and selecting includes means for repeating the accessing and selecting in response to  
3 subsequent user requests to provide a new channel.

1 21. (New) A preferences list for an entertainment system comprising:

2 a channel identifier for each preference to identify each channel; and

3 a source identifier for each preference to identify a source of the preference.

1 22. (New) The list of claim 21, wherein the source identifier, identifies a  
2 component of the entertainment system to be used to access the source.

1 23. (New) The list of claim 21, further comprising a list descriptor to  
2 distinguish the list from other preferences lists.

1 24. (New) The list of claim 23, wherein the list descriptor includes a user  
2 identification

1 25. (New) The list of claim 23, wherein the list descriptor includes a category  
2 identification.

1 26. (New) The list of claim 21, wherein the channel identifier is linked to an  
2 electronic programming guide containing further information regarding the channel.

1 27. (New) The list of claim 26, wherein the further information regarding the  
2 channel includes a tuning component to be used to access a source of the respective  
3 channel.

1 28 (New) A method for selecting a channel of an entertainment system  
2 comprising:  
3 accessing an identified preferences list of channels;  
4 identifying a current channel being provided to a user by the entertainment  
5 system;  
6 determining if the current channel is in the preferences list;  
7 in response to a user request to change channels, if the current channel is  
8 determined to be in the preferences list, then providing the channel subsequent to the  
9 current channel in the preferences list to the user.

1 29. (New) The method of claim 28, wherein in response to a user request to  
2 change channels, if the current channel is determined to not be in the preferences list,  
3 then providing a channel in the preferences list to the user.

1 30. (New) The method of claim 28, wherein the channel in the preferences list  
2 is the first channel in the preferences list.

1 31. (New) The method of claim 28, wherein the channel in the preferences list  
2 is the first channel in the preferences list that has a channel identifier greater than the  
3 current channel.

1 32. (New) The method of claim 27, wherein accessing an identified  
2 preferences list of channels comprises receiving a user identification from a user,

*At* 3 presenting a plurality of preferences lists for the identified user, and receiving a selection  
*Concl* 4 of one of the presented preferences lists from the user.
